JAVASCRIPT ASSIGNMENT : 04

Module 4: Operators and Conditions – Multiple Assignment Questions

---

Section 1: Arithmetic Operators

1. Create simple calculator using arithmetic operators

Create program that takes two numbers and performs addition, subtraction, multiplication and division.
Hint: Use basic arithmetic operators and display results clearly.

---

2. Create program to calculate area of different shapes

Create program that calculates area of circle, rectangle and triangle based on user choice.
Hint: Use arithmetic operators and conditional statements.

---

3. Create program to check even or odd number

Take a number and check whether it is even or odd.
Hint: Use modulus operator.

---

4. Create program to calculate power of number

Take base and exponent and calculate result.
Hint: Use exponent operator or loop.

Section 2: Comparison Operators

5. Compare two numbers and display largest

Write program that compares two numbers and prints which one is greater.
Hint: Use greater than operator inside if condition.

---

6. Create program to check eligibility for voting

Take age input and check if person is eligible to vote.
Hint: Use comparison operator with if statement.

7. Demonstrate difference between equal and strict equal

Write program where you compare number and string values using double equal and triple equal.
Hint: Compare 5 and string 5.

Section 3: Logical Operators

8. Create program to check login credentials

Check username and password using logical AND operator.
Hint: Both conditions must be true.

---

9. Create program to check number is between two values

Check whether number is between 10 and 50.
Hint: Use logical AND operator.

---

10. Create program using logical OR

Check if user role is admin or manager and allow access.
Hint: Use OR operator.

---

11. Create program using logical NOT

Create program that reverses boolean value.
Hint: Use NOT operator.

Section 4: if else Based Questions

12. Create program to check positive negative or zero

Take number input and check whether number is positive negative or zero.
Hint: Use if else if ladder.

---

13. Create grade calculation system

Take marks and display grade like A B C D based on range.
Hint: Use multiple else if conditions.

---

14. Create program to find largest among three numbers

Take three numbers and print largest.
Hint: Use nested if or logical operators.

---

15. Create simple traffic light system

Based on color input print action like stop ready go.
Hint: Use if else or switch.

Section 5: switch Statement Questions

16. Create menu driven calculator using switch

Take operator choice like plus minus multiply divide and perform operation.
Hint: Use switch on operator value.

---

17. Create day of week program

Take number from 1 to 7 and print corresponding day name.
Hint: Use switch case.

---

18. Create month name program

Take month number and print month name.
Hint: Add default case.

Section 6: Tricky Interview Questions

19. Predict output for double equal and triple equal comparisons

Write multiple comparison examples and explain output.
Hint: Include null undefined and boolean cases.

---

20. Create nested condition example

Create program where first check age then check qualification for job selection.
Hint: Use nested if statements.

---

21. What happens if switch does not have break

Create switch example without break and observe output.
Hint: Understand fall through behavior.

---

22. Write program to check leap year

Take year input and check if it is leap year.
Hint: Use multiple logical and comparison operators.
